Amendment to the Claims:

In Claim 1 the proviso,

"terminating the voice call, wherein said termination initiates a switch **form** the voice mode of the" has been changed to

"terminating the voice call, wherein said termination initiates a switch from the voice mode of the."

Claim 7 (currently amended): A computer-readable medium having <u>instructions</u> encoded thereon which is interpretable by a browser, wherein <u>the instructions provide for switching between a voice mode of a voice browser and a visual mode of a visual browser in a device operated by a user, wherein only one of said voice mode and visual mode is operable at any point in time on said device, said method comprising the steps of:</u>

clicking a link on a first visual card in said visual browser by said user, wherein said clicking initiates a switch from the visual mode of the visual browser to the voice mode of the voice browser; navigating forward to an update card, wherein said step of navigating forward to said update card constitutes a forward entry into said update card;

wherein said forward entry initiates a forward event handler for placing a voice call to a phone number, and terminating the visual browser;

contacting an update host;

receiving from said update host, information indicative of content of the visual browser; updating the state of said voice call to the state of the visual browser when the user clicked; terminating the voice call, wherein said termination initiates a switch from the voice mode of the voice browser to the visual mode of the visual browser;

wherein said termination of the voice call creates a backward entry to the update card and wherein said backward entry initiates a backward event handler for contacting said update host and receiving information indicative of said interaction with said content of the voice browser;

updating the state of the visual browser, in accordance with said information received, to the state of the voice call when the voice call terminated, and resuming interaction in visual mode with the user.

Claim 9 (original): The computer-readable medium of claim 7, wherein said <u>forward</u> first event handler is adapted to initiate a timer following initiation of said voice call, and wherein said <u>backward</u> second event handler is actuatable by an expiration of said timer.

Claim 10 (original): The computer-readable medium of claim 9, wherein said <u>forward first</u> event handler sets said timer to expire at a future point in time indicated by a variable, and wherein an action associated with said link sets said variable.

Claim 11 (original): The computer-readable medium of claim 9, wherein said browsers are adapted to create a new thread for placement of said voice call, and wherein said browsers continue instructions contained in the data following creation of said new thread regardless of whether said voice call has been completed.

Claim 12 (original): The computer-readable medium of claim 7, wherein the browsers are WAP browsers, and the instructions are in the form of Wireless Markup Language (WML).

Claim 13 (currently amended): The computer-readable medium of claim 7, wherein said <u>forward</u> first event handler comprises an instruction to place said voice call to a number specified <u>within</u> at a variable, and wherein an action associated with said link comprises the setting of said variable to a telephone number.
